

PERASPERA

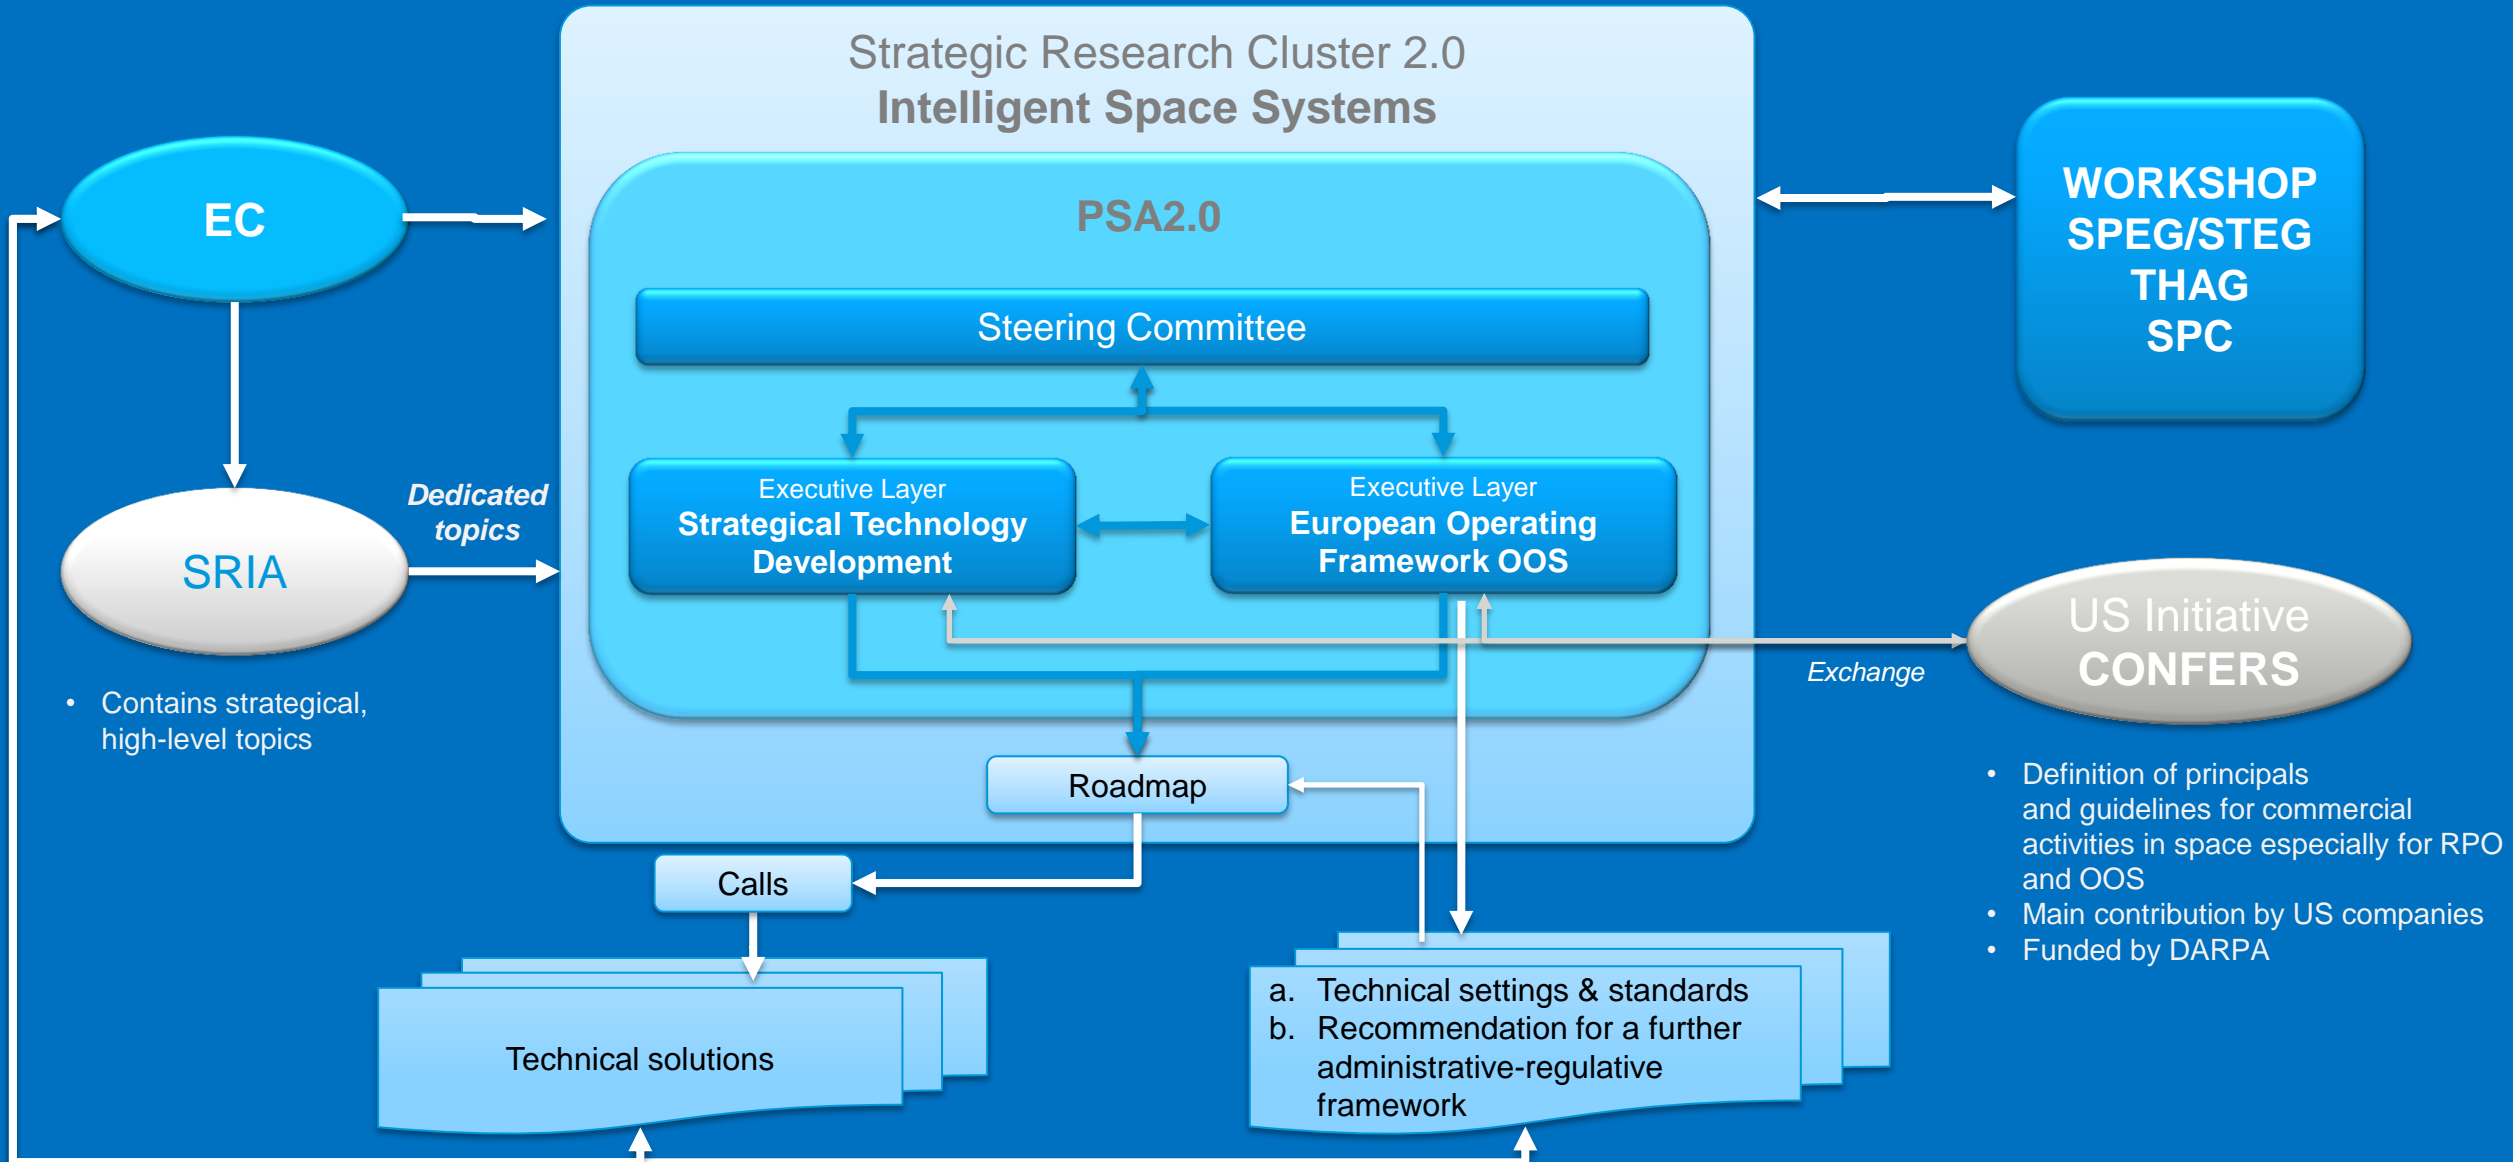

Evolution of the SRC: A European Framework for On-Orbit Servicing

Daniel Nölke (DLR)

Gianfranco Visentin (ESA)

Proposed scheme of roadmap-based approach (PSA & SRC2.0) in Horizon Europe

Operating framework branch to be included in SRC H2020

OPERATING FRAMEWORK

Function

- Define principles & guidelines for OOS, OOA and OOM
- Exchange with CONFERS

Contributors (PSA members)

- EU/ESA member states (Space Agencies or relevant office) & associated countries
- Industrial associations

Contributors (non-PSA members)

- Nominated Experts
- Companies
- Industrial associations

Guideline definition for business in space

- Consideration of international, relevant rules (e.g. UN-COPUOS LTS) as baseline
- Give recommendations on each national licencing authority for space activities for an „open method of coordination“
- Recommendations for a further administrative-regulative framework

Executive Layer
**European Operating
Framework OOS**

- a. Technical settings & standards
- b. Recommendation for a further administrative-regulative framework

Questions for discussion

- What is the Take from CONFERS for Europe?
- What should an EOF aim at? Major thematic focus areas?
- How should Europe navigate the global OOS landscape?
- Which setup would be favorable for an EOF (mandate, organizational, governance, membership, authorization, communication)?
- Which strategic and competitive considerations are important?
- What would be a logical order and sequence of events for setting up and implementing an EOF?

EOF subtopics/subgroups
